- The PNP Special Action Force (SAF) was based on the US six-color desert pattern. This design was the third camouflage pattern of the Special Action Force again altered the colorway. Subsequent printings utilize an even darker color palette. This pattern was introduced in 2001, and produced until 2006 (theoretically replaced by the digital design below); however, uniforms in this design continue to be worn by some members of the PNP.

DK-MU-056 WOODLAND M65

The jacket was introduced into U.S. military service in 1965 to replace the M-1951 field jacket which was an improvement on the M-1943 field jacket of World War II design. It has a built-in hood that can be rolled up and fits into a pouch on the back of the neck as opposed to the separate hood that attached to the M-1951.

The jacket is a lined hip length design, having a bi-swing back; a fly front closure secured by a zip and snap fasteners. It has two piece set-in sleeves (with adjustable cuffs and hand shield extension) and a convertible stand-up collar. The collar has an adjustable tab closure, secured with loop fastener tape and a horizontal zip fastener closure on the under-collar, which acts as the exit for the built-in hood. The built-in hood has a single draw-cord adjustment, and, when not in use, is concealed between the jacket outer shell and fabric liner.

The jacket has two bellows type breast pockets and two lower inside hanging pockets all with flap closures secured by snap fasteners. The specification (revision K) requires pieces of loop fastener tape in the following positions for insignia: at top of each sleeve for placement of patches; on the right and left sides of the chest directly above the breast pockets for name-tape and U.S. Army tape and a piece of loop fastener tape for the rank centred between the second and third snap fastener on front flap. There are also pieces of fastener tape on the collar tab, under-collar, sleeve tabs and outside of underarm.

On the inside of the jacket there are buttons for attaching the insulating liner in cold weather. It has open underarms, buttonholes at the neck and front edges, and button-hole tabs at the sleeve bottoms for attaching the liner to the jacket. The liner is quilted and made of polyester batting covered with 3 plies of ripstop nylon cloth.

- Multicam is a camouflage design originally developed for the US Army as a joint venture by Crye Precision and US Army Natick Laboratories. The intent of this design was to adequately camouflage the wearer when operating in many different environments and seasons, thus lessening the need for several camouflage patterns to remain within the supply system.

The combat shirt closely resembles the Marine Corps Combat Utility Uniform, but the portion covered by the Marine's body armor (such as the Outer Tactical Vest or Modular Tactical Vest) is not as highly reinforced due to the protective qualities of the vest, and to prevent discomfort. There are pockets only on the upper sleeve.

The combat trousers also closely resemble the utility uniform, but there is an additional calf-pocket to help distinguish it from non-FROG trousers. The gloves are designed to be highly durable.

DK-TS-010 LONG SLEEVE SHIRT

A shirt is a cloth garment for the upper body (from the neck to the waist).

Originally an undergarment worn exclusively by men, it has become, in American English, a catch-all term for a broad variety of upper-body garments and undergarments. In British English, a shirt is more specifically a garment with a collar, sleeves with cuffs, and a full vertical opening with buttons or snaps. A shirt can also be worn with a necktie under the shirt collar.

DK-TS-021 POLO SHIRT

A polo shirt is a form of shirt with a collar, a placket neckline with typically two or three buttons, and an optional pocket. Polo shirts are usually short sleeved. Polo shirts are usually made of knitted cotton, usually a Piqué knit, or less commonly an interlock knit, or using other fibers such as silk, merino wool, synthetic fibers, or blends of natural and synthetic fibers, which made polo shirt to be durable and and up to any challenge.

DK-MTS-005 T-SHIRT

The T-shirt evolved from undergarments used in the 19th century and, in the mid-20th century, transitioned from undergarment to general-use casual clothing.

T-shirt is a style of fabric shirt named after the T shape of its body and sleeves. Traditionally it has short sleeves and a round neckline, known as a crew neck, which lacks a collar. A V-neck T-shirt has a V-shaped neckline, as opposed to the round neckline of the more common crew neck shirt (also called a U-neck).

T-shirts are generally made of a stretchy, light and inexpensive fabric and are easy to clean. Typically made of cotton textile in a stockinette or jersey knit, it has a distinctively pliable texture compared to shirts made of woven cloth.

DK-MP-019 SWEATER

A sweater, also called a jumper or pullover, is a piece of clothing, typically with long sleeves, made of knitted or crocheted material that covers the upper part of the body. When sleeveless, the garment is often called a slipover. Sweaters were traditionally made from wool but can now be made of cotton, synthetic fibers, or any combination of these.

Military commando sweater is a favorite among police officers, paramedics, and security professionals. Featuring a durable material construction, this kind sweater will not only keep you warm while you're on the job but will last you a long time no matter how tough things get on duty.

DK-MJ-001 FLIGHT JACKET

A flight jacket is a casual jacket that was originally created for pilots and eventually became part of popular culture and apparel.

Today, flight jackets are usually associated with the MA-1, a now-obsolete U.S. military jacket, which is mostly found in sage green. It is made with flight silk nylon and usually has a blaze orange lining, with the specification tag in the pocket, though earlier models had a sage-green lining and the specification tag on the neck area. It has two slanted flap pockets on the front, two inner pockets, and a zipped pocket with pen holders on the left sleeve. The lighter weight version of the MA-1 is known as the L-2B flight jacket, which in turn, replaced both the original L2 and L2A jackets, which all three differentiate from the MA-1 as they have snap-down epaulets and no inside pockets.

DK-MCU-009 FULL DRESS UNIFORM

Full dress uniform or parade dress uniform is the most formal type of uniforms used by military, police, fire and other public uniformed services for official parades, ceremonies and receptions, including private ones such as marriages and funerals. Full dress uniforms typically include full-size orders and medals insignia. Design may depend on regiment or service branch, e.g. army, navy, air force, marines, etc.

DK-MR-001 RAINWEAR

A rainwear or slicker is a waterproof or water-resistant coat worn to protect the body from rain. The term rain jacket is sometimes used to refer to raincoats that are waist-length. A rain jacket may be combined with a pair of rain pants to make a rain suit. Modern raincoats are often constructed of breathable, waterproof fabrics such as Gore-Tex or Tyvek. These fabrics allow some air to pass through, allowing the garment to 'breathe' so that sweat vapour can escape.

DK-MC-001 COVERALLS

A boilersuit (or boiler suit), also known as coveralls, is a loose fitting garment covering the whole body except for the head, hands and feet.

Coveralls are most often worn as protective clothing over "street" clothes at work. They can be used for painting and decorating, mechanical work, farming, factory work, and other activities where clothes may become soiled. Many companies provide workers with corporate branded boilersuits for identification and marketing.

★ SPECIFICATIONS

POLYESTER 65% / COTTON 35%
- WEIGHT:
200GSM
- WEAVING TYPE:
Twill
- COLOR:
NAVY BLUE

A boilersuit is a one-piece garment with full-length sleeves and legs like a jumpsuit, but usually less tight-fitting. Its main feature is that it has no gap between jacket and trousers or between lapels, and no loose jacket tails.

It often has a long thin pocket down the outside of the right thigh to hold long tools. It usually has a front fastening extending the whole length of the front of the body up to the throat, with no lapels. It may be fastened with buttons, a zip, velcro, or snap fasteners. Boilersuits with an attached hood are available.

HELMET RETENTION STRAP SUSPENSION SYSTEM

H-nape material: high quality nylon. Weight: 90g compatible with: mich helmet. Color: black, dark earth package:mich helmet retention system h-nape set *1 (not include helmet) special nylon design with air permeability and durability. Developed to improve safety, comfort and stability of chinstraps used in mich/ach helmets. Every com-

ponent, down to each stitch pattern, was designed specifically for this purpose, giving the ach greater utility than ever before. Custom adjustment tabs allow the helmet to be adjusted while wearing it, without any hanging loose ends. Padded protective leather chin cup and nape pad. Simplified strap geometry makes the system 3x more stable than existing chinstraps.

Crown pad, front/back pads, side pads, 4 point Retention system with chin strap

BULLETPROOF HELMET WITHOUT PAINTING

BULLETPROOF STEEL

Bulletproof steel is the first material used to make bulletproof helmets. It's harder and stronger than ordinary steel, and much cheaper than Kevlar and PE, but much weaker than Kevlar and PE in bulletproof capability. In addition, a bulletproof steel helmet is usually heavy and uncomfortable to wear.

Therefore, when buying a bulletproof helmet, we should make a right choice on material according to the use situation and the actual needs.

MATERIAL

With the rapid development of material science from the late 20th century to the 21st century, a variety of materials for making helmets have been developed. As these materials all have their own unique characteristics, helmets made of different material require different environmental conditions during their use and preservation, which should be taken into consideration when choosing helmets.

Now, there are mainly three materials for making helmets, PE, Kevlar, and bulletproof steel.

KEVLAR

Aramid, also known as Kevlar was born in the late 1960s. It is a new high-tech synthetic fiber with strong high-temperature resistance, great anticorrosion, light weight and great strength. Thus Kevlar helmet is the mainstream equipment in the US Army and European army.

However, Kevlar helmet also has shortcomings: vulnerable to ultraviolet light and easy to hydrolyze. It's not suitable to use or store in the environment with strong ultraviolet light and high humidity for a long time. Besides, the increase of the usage of Kevlar has pushed up the price of Kevlar's raw materials and then the price of Kevlar helmets.

PE

PE here refers to UHMW-PE, the abbreviation of ultra-high molecular weight polyethylene. It is a high-performance organic fiber developed in the early 80s of last century. It has great ultra-high stability, low temperature resistance, and water resistance, which makes the maintenance of PE bullet-proof products more convenient; but it also has some a few drawbacks. For example, it is vulnerable to

high temperature, and doesn't resist creep as well as Kevlar. Due to its poor creep resistance, it cannot be used under high pressure for a long time. But compared with Kevlar helmet, it is lighter in weight and much cheaper.

DK-CT (CERAMIC TILES)

Aluminium oxide is a chemical compound of aluminium and oxygen with the chemical formula Al₂O₃. It is the most commonly occurring of several aluminium oxides, and specifically identified as aluminium(III) oxide. It is commonly called alumina and may also be called aloxide, aloxite, or alundum depending on particular forms or applications.

★ SIC

Sintered silicon carbide (SiC) ceramic is a new kind of bulletproof ceramic material, with low density, high strength, high hardness, high temperature resistance, oxidation resistance, corrosion resistance and other excellent performances. Now it's more and more preferred to be the bulletproof ceramic pieces. The sintered silicon carbide ceramics we produced is made of purity sub-micron silicon carbide powder according to the advanced formula imported from abroad. It's produced out after spraying granulation, pressure molding and sintered in the high temperature vacuum. As the structure inside is compact, small grains, the bulletproof performance of this product is superior. The ballistic insert plates made of our silicon carbide can reach the standard of NIJ0101.06III , IV, GA141-2010-V,BR-V,etc. proofed by shooting test for many times.

CONCEALABLE VEST

The shoulder is designed with Velcro for quick release and adjustment.

Durable Nylon outer shell (Color can be customized), remaining almost invisible beneath clothing.

Two flexible straps with Velcro cross opening waist for easy adjustment and access.

STANDARD FEATURES

- COMFORTABLE AND BREATHABLE CARRIERS WITH BULLETPROOF BALLISTIC PANELS
- THE ERGONOMIC DESIGN PROVIDES A MORE COMFORTABLE FEEL.
- DURABLE OUTER SHELL WITH HIGH ABRASION RESISTANCE PROPERTIES
- PERFECTLY ADAPTED FOR WEARING UNDER CLOTHES.
- RAPID RELEASE ADJUSTMENT SYSTEM IN THE SHOULDERS AND WAIST FOR RAPID DOFFING
- MADE OF 100% KEVLAR OR UHMWPE AS STANDARD.
- AVAILABLE WITH NIJ-STANDARD-0101.06 LEVEL IIIA INTERNATIONAL BALLISTIC STANDARD

DK-BVC-006

VIP VEST

Equipped with fake buttons, which ensure a comprehensive whole front safety protection while ensuring an official casual style.

Lightweight polyester or cotton material (Color can be customized), remaining almost invisible beneath clothing.

Two strap on the backside, with the high strength Velcro cross opening waist for easy adjustment and access.

The Tactical Concealable Bulletproof Vest DK-BVC-006 is designed to be worn under suit for official situation. It enhances protection area from front and back area. In the meantime, combined with low weight, a highly fit to the body, providing comfort and mobility which makes the concealable maximum.

STANDARD FEATURES

- COMFORTABLE AND BREATHABLE CARRIERS WITH BULLETPROOF BALLISTIC PANELS
- THE OFFICIAL DESIGN IS SUITABLE FOR VIP.
- MOISTURE-WICKING, ANTI-MICROBIAL INNER LINING.
- PERFECTLY ADAPTED FOR WEARING UNDER CLOTHES.
- MADE OF 100% KEVLAR OR UHMWPE AS STANDARD.
- AVAILABLE WITH NIJ-STANDARD-0101.06 LEVEL IIIA INTERNATIONAL BALLISTIC STANDARD

BAG AND BACKPACK

DK-MB-002 MILITARY BACKPACK

Backpacks are the main equipment used to carry supplies. They are essential and important equipment for soldiers. When people talk about the word "soldier," the image of a soldier who is wearing a helmet, carrying a heavy backpack, wearing camouflage uniforms and military boots, and holding a rifle fighting on the battlefield is the first thing that comes to mind. With the changes in the needs of the war environment, as well as the application of technology such as material technology and ergonomics in the field of military equipment, military backpacks in different periods have their distinctive characteristics of the times.

Tactical backpacks have very good performance in the durability, toughness, and molle system. With different materials and accessories, we can meet various requirements from customers all over the world.

DK-MB-001 ALICE PACK

Alice Pack is short for All-Purpose Lightweight Individual Carrying Equipment. ALICE is an equipment attachment system and accessory set officially adopted by the military in 1973. The ALICE pack has since been phased out of military service, but lots of people still prefer this method of carry. ALICE packs were designed as a two-component system. Firstly, the belt system, with entrenching carrier, two small cases, canteen cover and suspenders. Secondly, the elements comprising the bag itself which include the cover, bag and frame.

One of the main advantages of the ALICE system is its ruggedness. This pack is capable of carrying large loads and has the added benefit of being moisture resistant (not necessarily waterproof). There are no zippers to break, allowing for some serious gear stuffing. If you're going on a big hike, these should definitely be considered! ALICE packs can be used with or without a frame but the external frame definitely helps balance the load – otherwise, these packs get pretty centre-fat. But, essentially lots of gear that can be stuffed in one bag, is pretty handy.

DK-MB-050 HYDRATION PACKS

Hydration packs are backpacks with built-in water storage reservoirs or bladders, and an easy access drinking tube and bite valve that allows you to conveniently take a sip of water whenever the need arises, without having to stop or even slow down. Hydration packs are extremely useful for recreational activities and sporting activities where hands-free style is best. A small hydration pack can be worn while walking, trekking, running, riding a mountain bike and most other activities.

HEADWEAR

DK-BC-011 BERET

Beret is a soft, round, flat-crowned hat, usually of woven, hand-knitted wool, crocheted cotton, wool felt, or acrylic fiber.

Berets are worn as part of the uniform of many military and police units worldwide, as well as by other organizations. Military berets are usually pushed to the right to free the shoulder that bears the rifle on most soldiers, but the armies of some countries, mostly within Europe, South America and Asia have influenced the push to the left. In some countries, berets are associated with elite units, who often wear berets in more unusual colors.

DK-MPC-001 PEAKED CAP

The peaked cap, service cap, forage cap, barracks cover or combination cap is a form of headgear worn by the armed forces of many nations, as well as many uniformed civilian organizations such as law enforcement agencies and fire departments.

Other principal components are the crown, band and insignia, typically a cap badge and embroidery in proportion to rank. Piping is also often found, typically in contrast to the crown color, which is usually white for navy, blue for air force and green for army. The band is typically a dark, contrasting color, often black, but may be patterned or striped.

DK-WC-001 KNIT CAP

Knit cap, originally of wool (though now often of synthetic fibers), is designed to provide warmth in cold weather. Typically, the knit cap is of simple, tapering constructions, though many variants exist. Being found all over the world where climate demands a warm hat.

- ★ SPECIFICATIONS
- > MATERIAL: ACRYLIC 50% / WOOL 50%
- > COLOR: BLACK

- > COUNTRY: ALBANIA

DK-BH-001,002 BONNIE HAT

Bonnie Hat (boonie hat) or booney hat, also known as giggle hat, is a form of wide-brim hat commonly used by military forces. Its design is similar to a bucket hat but with a stiffer brim. Often a fabric tape band of "branch loops" is sewn around the crown of the hat. This 'foliage ring' is meant to hold additional vegetation as camouflage. A strap provides stability. The crown may be vented with eyelets or small mesh panels.

DK-SH-002 SIDE CAP

Side cap is a military cap that can be folded flat when not being worn. It is also known as a garrison cap or flight cap in the United States, wedge cap in Canada, or field service cap in the United Kingdom. It has been associated with various military forces since the middle of the 19th century, as well as various civilian organizations.

TACTICAL BELT

DK-MTB-072 MILITARY TACTICAL BELT

Military belt is made of strong webbing and marketed to military, police, and other tactical use, with some connotation of configurable gear depending on the application. A belt usually is part of a soldier or police officer's uniform. Various bits of gear can be added or removed for mission-specific uses. Those various bits of kit could include things like mag carriers, a radio, handcuff case, a canteen, and so on and so forth. Military belt can be divided into three types according to its using environment: Military Belt, Police Belt and Tactical Belt.

BOOTS AND SHOES

GN002 COMBAT BOOTS

Combat boots are military boots designed to be worn by soldiers during combat or combat training, as opposed to during parades and other ceremonial duties. Modern combat boots are designed to provide a combination of grip, ankle stability, and foot protection suitable for a rugged environment. They are traditionally made of hardened and sometimes waterproof leather.

MILITARY OUTDOOR

DK-MSB-003 MILITARY SLEEPING BAG

Group Co., Ltd is a leading manufacturer specializing in canvas tents, like Big Tent, Military Tent, Relief Tent, etc., which are suitable for all army camping and hospital emergency. Our products are specifically designed to endure the daily abuse of a rental environment. All of our tents are constructed with durable high-quality materials, both on fabrics, frames and on spare parts. Each tent is tailored according to your special requirements and also your budget to make sure everything is exactly as you would wish. We pride ourselves on offering the excellent, personalized service that our customers should expect and deserve. We are able to concentrate on the attention to all the details in your requirements, whether it's tiny or not. Our aim is to provide high quality marquees along with a helpful and friendly service to make sure all events or occasions could be arranged as stress free as possible.
